

CompuServe Information Service Access Numbers

CompuServe Network Services (CNS) is the fastest, most reliable method of accessing the CompuServe Information Service and is available at a charge of \$5 per standard service connect hour. We urge you to check the cities listed below to see if you can access CompuServe through a CNS number.

Since the CNS network is constantly expanding you should

check the online telephone listing (available online under the "CIS Telephone Access Numbers") to get the latest additions. The information service also can be accessed through other supplemental networks for a surcharge. These numbers may be obtained by calling CompuServe Customer Service at 800/848-8990 or 614/457-8650.

These numbers are current as of March 1, 1983.

CompuServe

CompuServe Information Service Log-on Procedures

After your computer terminal is connected to a modem (and, if you are using a microcomputer, you are running a terminal emulator program), you are ready to connect to the CompuServe Information Service.

1. **Dial the CompuServe Information Service** access number for your area.
2. When you hear a continuous, high-pitched tone, properly **position the telephone handset in the acoustic coupler** or depress the data button on your modem. If you do not hear the tone hang up and redial.
3. To log on to the CompuServe Information Service, you need your User ID number and your secret password. With this information, **follow the procedures illustrated below** (user entries are underlined in the example):

Example

Enter a Control C. Usually this is accomplished by holding down the Control key while the C key is also pressed. Terminal keyboards vary; for further information see the instructions for the terminal software you are using or your personal computer dealer.

The CompuServe Information Service responds with USER ID. You **enter your personal User ID number** and press the ENTER key (carriage return key on some keyboards.) If there is no ENTER key or carriage return on your terminal, consult the manual for your personal computer or your personal computer dealer.

You are prompted for secret password. **Enter your password** and press ENTER. For security purposes, your password is a nonprinting entry (in full duplex).

NOTE: Unless you are told otherwise, all lines are terminated with ENTER (a carriage return) which feeds the information you have just typed into the computer.
